-תומך ב- aptX Low Latency codec

Type: Bluetooth 5.3 Headphone Adapter for Airplanes with aptX-Adaptive & Low Latency
Producer: Avantree Color: Black

Overview:

WIDE COMPATIBILITY

The included dual 3.5mm adapter makes the Relay usable on any plane, no matter what audio output jack it uses. It also works with any device that outputs audio via AUX, such as a tablet, PC, gym equipment, etc., and can connect to any and all Bluetooth headphones or earbuds (such as AirPods Pro 2).

APT X SUPPORT

With aptX Adaptive and aptX Low Latency codec support, the Relay transmits high-quality audio at a low latency when used with applicable listening devices. This dual headphone adapter also utilizes Bluetooth 5.3 technology, which enables it to provide stable, reliable connections.

LISTEN TOGETHER

The Relay's intuitive LEDs allow you to easily connect up to two audio devices to your AUX headphone adapter and share the audio with a friend.

LONG BATTERY LIFE

A battery life of up to 20 hours provides you with sufficient battery life to last you through any flight, movie marathon, or anything else. If the battery does run out, simply plug it in and continue to use it while it charges.

EASY CONTROLS

Adjust the volume, pair, reconnect, clear pairing history, and show battery level with the airplane headphone adapter's built-in controls. Monitor your connections and battery levels with its convenient LED indicators.
